

HOMEWORK 5

62. Calculate $f'(x)$ for $f(x) = x + \frac{1}{x}$ via the definition.

$$\begin{aligned}
 \underline{\text{Sol}}. \quad f'(x) &= \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h} = \lim_{h \rightarrow 0} \frac{\left(x+h+\frac{1}{x+h}\right) - \left(x+\frac{1}{x}\right)}{h} \\
 &= \lim_{h \rightarrow 0} \frac{h + \frac{1}{x+h} - \frac{1}{x}}{h} = \lim_{h \rightarrow 0} \left(1 + \frac{1}{h} \cdot \left(\frac{1}{x+h} - \frac{1}{x}\right)\right) \\
 &= \lim_{h \rightarrow 0} \left(1 + \frac{1}{h} \cdot \frac{x - (x+h)}{x(x+h)}\right) \\
 &= \lim_{h \rightarrow 0} \left(1 + \frac{1}{h} \cdot \frac{-h}{x(x+h)}\right) = \lim_{h \rightarrow 0} \left(1 - \frac{1}{x(x+h)}\right) \\
 &= 1 - \frac{1}{x(x+0)} = 1 - \frac{1}{x^2} \quad \boxed{1}
 \end{aligned}$$

72. What are $f(x)$ and a if $f'(a) = \lim_{h \rightarrow 0} \frac{(2(3+h)^2 - (3+h)) - 15}{h}$?

Sol: $f(x) = 2x^2 - x$ and $a = 3$.

$$\begin{aligned}
 \text{Check: } f'(a) &= \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h} \\
 \therefore f'(3) &= \lim_{h \rightarrow 0} \frac{f(3+h) - f(3)}{h} \\
 &= \lim_{h \rightarrow 0} \frac{(2(3+h)^2 - (3+h)) - (2 \cdot 3^2 - 3)}{h} \\
 &= \lim_{h \rightarrow 0} \frac{(2(3+h)^2 - (3+h)) - (2 \cdot 9 - 3)}{h} \\
 &= \lim_{h \rightarrow 0} \frac{(2(3+h)^2 - (3+h)) - 15}{h} \quad \checkmark \quad \boxed{1}
 \end{aligned}$$

76. Show $f'(1)$ does not exist for $f(x) = \begin{cases} -x^2 + 2 & \text{if } x \leq 1 \\ x & \text{if } x > 1 \end{cases}$

Sol: We'll calculate the limit corresponding to $f'(1)$ from both sides.

$$\text{Note } f(1) = -1^2 + 2 = 1.$$

$$\lim_{x \rightarrow 1^-} \frac{f(x) - f(1)}{x-1} = \lim_{x \rightarrow 1^-} \frac{(-x^2 + 2) - 1}{x-1} = \lim_{x \rightarrow 1^-} \frac{-(x^2 - 1)}{x-1} = \lim_{x \rightarrow 1^-} \frac{-(x-1)(x+1)}{x-1} = \lim_{x \rightarrow 1^-} -(x+1) = -(1+1) = -2$$

$$\lim_{x \rightarrow 1^+} \frac{f(x) - f(1)}{x-1} = \lim_{x \rightarrow 1^+} \frac{x - 1}{x-1} = \lim_{x \rightarrow 1^+} 1 = 1.$$

$$\therefore \lim_{x \rightarrow 1} \frac{f(x) - f(1)}{x-1} = -2 \neq 1 = \lim_{x \rightarrow 1^+} \frac{f(x) - f(1)}{x-1}, \text{ so } f'(1) \text{ does not exist! } \boxed{3}$$

83. Calculate $f''(x) = \lim_{h \rightarrow 0} \frac{f'(x+h) - f'(x)}{h}$ for $f(x) = x + \frac{1}{x}$.

Sol. From problem 62 we know $f'(x) = 1 - \frac{1}{x^2}$.

$$\begin{aligned}f''(x) &= \lim_{h \rightarrow 0} \frac{f'(x+h) - f'(x)}{h} = \lim_{h \rightarrow 0} \frac{\left(1 - \frac{1}{(x+h)^2}\right) - \left(1 - \frac{1}{x^2}\right)}{h} \\&= \lim_{h \rightarrow 0} \frac{-\frac{1}{(x+h)^2} + \frac{1}{x^2}}{h} = \lim_{h \rightarrow 0} \left(\frac{1}{hx^2} - \frac{1}{h(x+h)^2} \right) \\&= \lim_{h \rightarrow 0} \left(\frac{(x+h)^2}{hx^2(x+h)^2} - \frac{x^2}{hx^2(x+h)^2} \right) = \lim_{h \rightarrow 0} \frac{(x+h)^2 - x^2}{hx^2(x+h)^2} \\&= \lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - x^2}{hx^2(x+h)^2} = \lim_{h \rightarrow 0} \frac{h(2x+h)}{hx^2(x+h)^2} \\&= \lim_{h \rightarrow 0} \frac{2x+h}{x^2(x+h)^2} = \frac{2x+0}{x^2(x+0)^2} \\&= \frac{2x}{x^4} = \frac{2}{x^3}\end{aligned}$$

$$\therefore f''(x) = \frac{2}{x^3} \quad \boxed{\text{Q.E.D}}$$
